

Climate Resilience in the Caribbean

Lessons from Puerto Rico and Cuba

As extreme weather events become more frequent, there is much we can all learn about resilience from communities that are vulnerable to extreme weather in the Caribbean and are on the front line of climate change.

Join EDF for a conversation with non-profit, academic and government leaders as they discuss the importance of adopting policy and implementing strategies to provide clean, affordable, and resilient power to those most in need and to develop sustainable marine ecosystems that can serve as models of resilience for other countries around the world.

23 September

2:00pm – 3:00pm EST

11:00am – 12:00pm PST
